899 Coulometer with generator electrode without diaphragm and 885 Compact Oven SC

2.899.3110

This titration system is comprised of an 899 Coulometer and an 885 Compact Oven Sample Changer. It offers automated thermal sample preparation with subsequent water content determination in the smallest of spaces.

This means that samples unsuitable for direct Karl Fischer titration can be analyzed. With the aid of tightly sealed sample vials, the samples are moved into the oven of the 885 Compact Oven Sample Changer. The sample is heated up, the water it contains is vaporized and channeled into the titration cell. The water content of the sample is then determined with the 899 Coulometer.

Below, the accessories are grouped into Scope of delivery and Optional accessories.
Please keep this printout at hand for ordering replacement material.
