Welcome at the Metrohm Academy

Planning a new production site? Would you like to adopt a new analytical technique? Maybe you want to master your skills? Whatever your requirement is, hands-on training of your staff on respective Metrohm Instruments is always a good decision.

Our training schedule is designed to cover the 3 basic instrument techniques, Titration, Karl Fischer and Ion Chromatography. Spread across our 3 branches based in Woodmead in Johannesburg, Paardevelei in Cape Town and Mount Edgecombe in Durban to ensure that we reach our valuable customers.

These courses are designed to be completed in groups of 10 delegates and upon completion will receive a User Competency Certificate.

Tailored Training

Can't make the group course? Have a large group that needs training on site? Or perhaps you want to have a more tailored training program for your staff. Get in contact with our Metrohm Academy to discuss your requirements.
