

# Cyanide and sulfide on Metrosep A Supp 10 - 100/2.0 using amperometric detection

Trace determination of cyanide and sulfide require an alkaline eluent and amperometric detection. This Application Note describes a new column/eluent combination for optimized separation. The combination consists of the microbore Metrosep A Supp 10 - 100/2.0 column and a sodium hydroxide eluent containing a trace of EDTA for transition metal complexation. This yields in better peak shape and detection limits below 0.05 µg/L.
