## Titration Application Note T-099

## Fully automated determination of acidity in orange juice

The automated system determines acidity in all kind of juice samples. The high degree of automation (e.g., automated calibration, as well as automated titer determination) minimizes errors and guarantees an outstanding reproducibility.

## Method description

## Sample

Orange juice

## Sample preparation

10 mL sample is treated with 40 mL dist. HO and heated until it starts to boil.

## Electrodes

| Ecotrode plus | 6.0262 .100 |
| :--- | :--- |
| Solutions | $C(\mathrm{NaOH})=0.1$ mol/L, <br> if possible this solution <br> should be bought from a <br> supplier. |

## Analysis

After cooling down the beakers with the prepared mixture, the samples are placed on the rack. Then titrate with $c(\mathrm{NaOH})=0.1 \mathrm{~mol} / \mathrm{L}$ to $\mathrm{pH}=8.5$. After every sample, the electrode equipment is cleaned while stirring in a special beaker filled with distilled water.

## Instrumentation

| 862 Food/Beverage Compact | 2.862 .1010 |
| :--- | :--- |
| Titrosampler |  |
| or |  |
| 848 Titropackage Plus | 2.848 .0110. |

## Results

| Parameter | Mean $(n=6)$ |
| :--- | :--- |
| Rel. standard <br> deviation in $\%$ |  |
| Acidity | $143.76 \mathrm{meq} / \mathrm{L}$ | 0.34

## Parameters

| Mode | SET pH |
| :--- | :--- |
| Time interval MP | 2.0 s |
| Endpoint 1 at pH | 8.50 |
| Dynamics | off |
| Max. rate | $10.00 \mathrm{~mL} / \mathrm{min}$ |
| Min. rate | $25.00 \mu \mathrm{~L} / \mathrm{min}$ |
| Stop criterion | Drift |
| Stop drift | $20 \mu \mathrm{~L} / \mathrm{min}$ |
