## Titration Application Note T-107

## Fully automated determination of total iron in cement

This Application Note describes the fully automated complexometric determination of iron in cement (digested) with a copper ion-selective electrode and the MATi 07 system.

## Method description

## Sample

Cement

## Sample preparation

Sample preparation according to DIN EN 196-2

| Configuration MATi 07 |  |
| :--- | :--- |
| Ion-selective electrode, Cu | 6.0502 .140 |
| LL ISE Reference | 6.0750 .100 |

## Solutions

| Titrant | $\mathrm{c}\left(\mathrm{CuSO}_{4}\right)=0.1 \mathrm{~mol} / \mathrm{L} \text { in } \mathrm{H}_{2} \mathrm{O}$ <br> If possible, this solution should be bought from a supplier |
| :---: | :---: |
| EDTA solution | $\begin{aligned} & \mathrm{c}\left(\mathrm{Na}_{2} \text { EDTA }\right)=0.1 \mathrm{~mol} / \mathrm{L} \text { in } \\ & \mathrm{H}_{2} \mathrm{O} \end{aligned}$ <br> If possible, this solution should be bought from a supplier |
| Acetate buffer | 123 g sodium acetate and 86 mL glacial acetic acid are dissolved in distilled water and filled up to 1 L |
| Standard | Ammonium ferric(III) sulfate ( $0.1 \mathrm{~mol} / \mathrm{L}$ ) (Fluka, Titer = $1.000 \pm 0.3 \%$ (rel.), $20^{\circ} \mathrm{C}$ ) If possible the standard should be bought from a supplier |

## Analysis

The sample solution is diluted with approximately 50 mL distilled water in a titration beaker. Buffer solution ( 5 mL ), and an excess (e.g., 10 mL ) of EDTA solution are added. The excess of EDTA is back-titrated with $c\left(\mathrm{CuSO}_{4}\right)=0.1 \mathrm{~mol} / \mathrm{L}$ in $\mathrm{H}_{2} \mathrm{O}$.

## Parameters

| Mode | MET U |
| :--- | :--- |
| Pause | 30 s |
| Stirrer speed | 8 |
| Volume. increment | $100 \mu \mathrm{~L}$ |
| Signal drift | $50 \mathrm{mV} / \mathrm{min}$ |
| Max. waiting time | 26 s |
| Stop EP | 1 |
| EP criterion | 5 mV |
| EP recognition | greatest |

## Results

Ammonium ferric(III) sulfate ( $0.1 \mathrm{~mol} / \mathrm{L}$ ) standard

| Parameter | Mean in mol/L | RSD <br> $(\%)$ | Recovery <br> $(\%)$ |
| :--- | :--- | :--- | :--- |
| Iron(III) <br> $1,2,3,4,5$, <br> $6,7,8,9 \mathrm{~mL}$ | $0.1006(\mathrm{n}=9)$ | 0.55 | 100.6 |
| Iron(III) <br> $9 \times 5 \mathrm{~mL}$ | $0.1012(\mathrm{n}=9)$ | 0.21 | 101.2 |

Sample solution

| Parameter | Mean in \% | RSD (\%) |
| :--- | :--- | :--- |
| \% $\mathrm{Fe}_{2} \mathrm{O}_{3}$ | $2.51(\mathrm{n}=4)$ | 0.04 |
