## Titration Application Note T-121

## Automated determination of indium in aqueous solution using the Cu ISE

Indium in aqueous solutions can be analyzed by back-titration in slightly acidic solution. The ion-selective copper electrode is used as indicator electrode.

## Method description

## Sample

Aqueous solution of indium

## Sample preparation

No sample preparation is required.

## Analysis

Pipet a sample volume containing no more than 100 mg $\mathrm{In}^{3+}$ into the titration vessel and dilute with 50 mL deion. $\mathrm{H}_{2} \mathrm{O}$. Add $10.00 \mathrm{~mL} \mathrm{c}($ EDTA $)=0.1 \mathrm{~mol} / \mathrm{L}$ and 5 mL buffer solution $\mathrm{pH}=4.7$. If necessary adjust the pH to 4.7 with ammonia. After stirring for 30 s back-titrate the EDTA excess with $c\left(\mathrm{CuSO}_{4}\right)=0.1 \mathrm{~mol} / \mathrm{L}$ until after the first equivalence point.
