## Titration Application Note T-148

## Zirconium analysis using automated photometric titration

Zirconium can be determined in acidic aqueous solutions (buffer pH 1 ) by direct titration with EDTA. Eriochrome cyanine R is used as indicator. For equivalence point indication, the Optrode is used at a wavelength of 520 nm .

## Method description

## Sample

Aqueous solution of zirconium ( $0.05 \mathrm{~mol} / \mathrm{L}$ )

## Sample preparation

No sample preparation is required.

## Solutions

| EDTA solution | $\mathrm{C}\left(\mathrm{Na}_{2} \mathrm{EDTA}\right)=0.1 \mathrm{~mol} / \mathrm{L}$ <br> If possible this solution <br> should be bought from a <br> supplier. |
| :--- | :--- |
| Eriochrome cyanine R | 40 mg Eriochrome cyanine <br> R is dissolved in 100 mL <br> deion. water. |
| Buffer pH 1 | A buffer concentrate should <br> be bought from a supplier. |

## Analysis

5 mL sample solution is pipetted into a 200 mL plastic beaker and 90 mL deion. water is added. After the addition of 5 mL buffer pH 1 and 1 mL eriochrome cyanine R indicator solution, the zirconium is titrated with $c\left(\mathrm{Na}_{2} E D T A\right)=0.1 \mathrm{~mol} / \mathrm{L}$ until after the equivalence point.
