The result of 50 years experience in the area of spectroscopy was incorporated in the development of this NIRSystems spectrometer. The unique technology improves the signal-noise ratio at high resolution and enhances accuracy and precision. The patented monochromator and the modular design of the measuring module system make NIRSystems instruments indispensable for the spectral measurement of every imaginable sample type in the visible and near-infrared wavelength range (400 - 2,500 nm). The measuring modules can be replaced without difficulty, even during operation. This means that the user profits from the great flexibility in all areas of application.

**Rapid, nondestructive analyses of solid and liquid substances**

The NIRS XDS RapidContent Analyzer – Solids enables rapid, nondestructive analyses of solid powders, coarser granulates, pellets or flakes.

Composition or material identification testing is performed either in the laboratory or at-line, on samples contained in their original packaging, bags or vials. An optional variable spot-size feature enables the sample illumination to be adjusted based on the physical properties of your samples.

The measurement of liquid samples succeeds through the addition of the NIRS Transflection Kit for liquid samples (order number: 6.7400.010).

The sample is centered with the aid of the NIRS XDS iris (order number: 6.7425.000), thus enhancing the reproducibility of the analysis.

Thanks to the integrated mobile sample slide in X direction, the NIRS XDS RapidContent Analyzer enables the investigation of larger-sized nonhomogenous sample quantities.
